Portfolio company credit & investment risk

BDCs invest primarily in debt and equity securities of smaller and developing companies, as well as financially troubled companies, most of which are privately held and lack publicly available information. These loans and investments may not be considered investment grade and are often illiquid and not transparent. As a result, an investment in a BDC is speculative and involves a high degree of risk.

Leverage

BDCs may employ leverage, borrowing to gain greater investment exposure. In turn, this leverage creates the opportunity to magnify investment returns, but also may magnify losses – higher highs and lower lows.
